

INTERCHANGEABILITY LIST

J/E PUMPS

Starting from 2022, SUNTEC is converting its entire industrial pump range to be compatible with biofuels, including FAME, HVO and E-Fuels. SUNTEC upgraded critical components by high quality materials with better chemicals resistance and improved stability against oxidation.

In addition to this adaptation, SUNTEC redesigned its pump design to simplify maintenance operation and pump characteristics readability on pump.

New pumps with new design and compatible with biofuels are identified by revision 8 (ex. J6 PCC 1000 **8P**).
